Medieval Telangana: evidence, resistance, political ecology and cultural exchange

TGPSC Group I · Paper II · Unit II · Topic 2 | New focused research supplement | 26 October 2026

Status: Original study material, not an official previous-year question paper, not a replacement for the preserved older PDF, and not independently academically approved.

Exact syllabus boundary and learning outcomes

The commission's Notification 02/2024 (19 February 2024), Paper II, Section II, Item 2, prescribes medieval Telangana and composite culture; Kakatiya and Velama contributions to social-cultural development, literature, music, dance, art and architecture; Qutb Shahi contributions to Telugu literature, art and architecture; and protest movements associated with Sammakka–Sarakka and Sarvai Papanna. This supplement is designed to deepen **source interpretation and historical argument**, not to reproduce the already published medieval-institutions supplement. After reading it, students should distinguish inscriptional, architectural, literary and oral evidence; connect water and fortification to political economy; explain linguistic patronage without claiming universal harmony; and treat resistance traditions according to the dates and genres of their sources.

1. A source hierarchy for medieval Telangana: what can actually be known?

An inscription fixed to a temple, copperplate or tomb can often establish a donor, title, grant, dedication or regnal date, but it is not a neutral census of social life. Its audience and purpose matter. A royal eulogy magnifies victory, while a land-grant charter may specify an institution's privileges and exclude ordinary cultivators from its narrative. Architecture can establish spatial planning and construction technology; a later restoration, however, cannot automatically be assigned to the original builders. Court poetry reveals language, aesthetic ideals and patronage, not an exact transcript of everyday speech. Oral accounts preserve community memory and moral claims; they do not supply precise medieval battle dates unless corroborated independently.

These differences matter most when a question joins Kakatiya authority, Sammakka–Sarakka resistance and Qutb Shahi cosmopolitanism. The three subjects are not evidenced in the same way. A student who treats a Medaram narrative, a dated Persian epitaph and a modern heritage notice as interchangeable sources commits a methodological error. Build a matrix: **claim → earliest source → source genre → corroboration → uncertainty**. Where no contemporary corroboration has been inspected, write 'tradition associates' rather than 'an inscription proves'. This protects historical dignity without manufacturing certainty.

2. Kakatiya chronology through political transitions, not memorised reign lists

The Kakatiyas emerged within the Western Chalukya political sphere before developing an independent centre around Hanamkonda and Warangal. Rudradeva's political consolidation, Ganapati Deva's expansion, Rudrama Devi's sovereignty and Prataparudra's confrontation with Delhi are stages in changing relations with chiefs, armies, religious institutions and revenue-producing territories. The 1323 conquest of Warangal by Ulugh Khan's forces ended Kakatiya dynastic rule, but did not end Telugu cultural production or tank-based agriculture. The capital's fall and the transformation of local authority are different historical processes.

Chronology must be tested against epigraphic dates and carefully edited narratives. The 1163 Hanamkonda inscription associated with Rudradeva is frequently used for the Thousand Pillar Temple context, while the Palampet inscription of 1213 associates the Ramappa complex with Recharla Rudra under Ganapati Deva. These are useful anchors, not proof that every surviving structure was built in exactly the same year. When a ruler's name appears in a source, ask whether it records construction, endowment, victory, repair or later

commemoration. Avoid assuming that royal sovereignty meant complete territorial control at every moment.

3. Recharla Rudra, Ramappa and the difference between king and patron

The Rudreshwara temple at Palampet illustrates the gap between dynastic branding and actual patronage. Its building history belongs to the Kakatiya period, but Recharla Rudra, a commander under Ganapati Deva, is central to the patronage record. A textbook answer that credits every aspect of Ramappa directly to Ganapati Deva overlooks the role of military elites and local institutional networks. UNESCO's property description connects the temple with sculpted granite and dolerite pillars, a lightweight brick superstructure, dance imagery and the neighbouring reservoir landscape. The site demonstrates skilled labour and technical adaptation rather than a single ruler's isolated achievement.

Its 2021 World Heritage inscription is a **modern conservation designation**, not a medieval date. UNESCO's 2025 boundary modification is likewise contemporary heritage administration. The setting matters: temple, lake, fields and forest edge form an interdependent cultural landscape. Heritage conservation cannot focus only on the carved sanctum while allowing catchment changes to damage its historical environment. A mains answer should distinguish original inscription, construction phases, present-day restoration and heritage management, explaining what each source actually establishes.

4. Tanks as fiscal, ecological and social institutions

Telangana's rainfall seasonality made storage critical for cultivation. A reservoir increased the possibility of second crops or cultivation on land beyond immediate rainfall, but its effect depended on sluices, catchment health, bund maintenance and allocation rules. A tank could increase agricultural output, thereby raising the revenue potential of a region and the capacity of chiefs to fund temples, soldiers and urban centres. This relationship explains why irrigation works can be political documents even when they look like engineering projects.

Yet the distribution of benefits was never automatic. Landholders nearer the outlet might command more reliable access, while labouring households contributed to repairs without enjoying proportional gains. Inscriptions tend to preserve donor names, not a complete record of who excavated earth or desilted channels. Archaeological identification of Pakhal, Laknavaram and Ramappa tanks must be done site by site; a modern tourism description cannot establish identical medieval management for all three. Contemporary Mission Kakatiya provides a useful comparison about restoration needs, but not evidence of unbroken medieval administrative procedures. The strongest analysis joins hydrology, social hierarchy, labour and political authority.

5. Warangal: fortification, ceremonial space and changing urban layers

Warangal is often reduced to its stone gateways. The historical city, however, contained defensive lines, entrances, ritual spaces, roads and productive communities. The Kakatiya Kala Thoranams express elite ceremonial design; the fort's successive modifications reflect conflict and re-use. An intact gateway does not permit a confident reconstruction of a lost palace without survey evidence. Nor does a surviving wall establish the ethnic identity or wages of its builders. Urban history requires reading landscape and material layers together.

The 1323 conquest altered who claimed taxes and military allegiance, but local craft skills, waterworks and religious networks could persist. Later states appropriated or altered earlier urban fabric. A strong comparison asks what changed rapidly—dynastic sovereignty, garrisons and fiscal claims—and what changed more slowly—settlement, irrigation, language and occupational networks. Such a distinction is superior to both 'total destruction' and 'complete continuity' narratives. Archaeological uncertainty should be made explicit rather than filled with dramatic descriptions of a single battle.

6. Rudrama Devi and the political grammar of gender

Rudrama Devi's reign demonstrates that a woman could exercise sovereignty in a system whose military and genealogical vocabulary was often masculine. Regnal titles, succession strategies, relationships with commanders and the acceptance of authority by local elites were political resources. Her rule should not be described merely as a modern empowerment story; it unfolded within a specific aristocratic order. Inscriptions and later narrative sources do not carry equal weight for every episode of her life. Claims about precise battlefield circumstances, rebel lists or final moments require more than repetition in modern popular histories.

Gender analysis must distinguish the exceptional royal office from the position of ordinary women. A female sovereign does not establish equal inheritance, labour rights or access to education across the realm. Conversely, the existence of patriarchal structures does not negate Rudrama Devi's agency. Students should explain the institutional constraints under which she exercised power, then identify the evidence and its limitations. This yields a balanced answer on governance, not a slogan.

7. Velama polities: Rachakonda and Devarakonda after 1323

The post-Kakatiya era was not a simple relay in which one unified kingdom replaced another. Local chiefs, Musunuri leaders, Velama rulers and expanding Bahmani and Vijayanagara powers negotiated shifting alliances. Rachakonda and Devarakonda were distinct fortified centres associated with Padma Nayaka Velama lineages. Their location and fortifications indicate the importance of regional control, access routes and defensible terrain. District heritage accounts preserve useful site identifications, but sweeping claims of exact territorial boundaries or uninterrupted dates should be checked against inscriptions and critical political histories.

Velama patronage can be analysed through courtly Telugu literature, temple grants and fort architecture. A royal genealogy praises a lineage; it does not automatically reveal the status of every pastoralist, farmer or artisan under that court. Equally, alliances across religious or linguistic lines were strategic and varied by circumstance. Explain political fragmentation as a process of state formation, not merely as disorder. The forts illustrate how local sovereignty continued to matter between the Kakatiya and later Deccan sultanate periods.

8. The cultural economy of Telugu literary production

Telugu literary activity crossed dynastic boundaries. Palakuriki Somanatha's Vira Shaiva writings show devotional, vernacular and religious debates; Jayapa Senani's Nrtta Ratnavali documents categories of performance; other scholars worked through Sanskrit, Telugu and regional oral traditions. Patronage did not mean a king personally authored or supervised every text. Literary production required scribes, performers, religious teachers, manuscript transmission and audiences, many of whom are absent from dynastic narratives.

A good literary answer identifies **author, work, genre, approximate context, patronage and interpretive limit**. The existence of a courtly text does not prove that every village spoke its literary register. A modern printed edition may regularise spellings and remove textual variants. Consequently, claims about exact original wording need a critical edition, not a secondary paraphrase. This supplement does not assert that all cited works have been checked against their earliest manuscripts. The methodological distinction between original composition and modern reconstruction is part of the syllabus's cultural-history objective.

9. Perini, sculptural evidence and the limits of revival

Kakatiya-era performance history combines textual categories in Nrtta Ratnavali, sculptural figures at Ramappa and later performance traditions. These sources can illuminate one another, but cannot be equated. A sculpture freezes a pose; it cannot demonstrate the full sequence, rhythm, costume or social meaning of an entire performance. A prescriptive treatise records an intellectual classification that may not reflect every local performance. Modern Perini Shivatandavam revival has cultural value while involving interpretation and reconstruction.

To evaluate a claim of 'unbroken continuity', demand evidence across the intervening centuries. Without that chain, describe a modern revival drawing on medieval heritage. This is not disrespectful: it clarifies the distinction between historical documentation and creative cultural stewardship. Telangana cultural institutions can use dance heritage in education and tourism, but historical claims should be proportionate to the sources. In mains writing, contrast textual, sculptural and living evidence under separate subheadings.

10. Qutb Shahi transition and the evidence of built space

The Qutb Shahi dynasty developed within the Deccan sultanate world and ruled from the early sixteenth century until Mughal conquest in 1687. Golconda's fortifications, water systems, royal necropolis and commercial spaces reflect state power as well as urban labour. UNESCO's tentative-list dossier, submitted in 2010, describes the monuments as a connected cultural landscape and identifies dated Persian inscriptions on tombs and fort structures. It is an official nomination document with valuable evidence references, but **tentative listing is not World Heritage inscription**.

Hyderabad's foundation under Muhammad Quli Qutb Shah in 1591 added a planned urban centre linked to Charminar and axial streets. The city's founding should be analysed through administration, markets, ceremonial design and migration, not only a romantic legend. The existence of mosques, temples, tombs and bazaars in the wider region points to multiple communities but does not itself establish equal political power. A built environment is a record of aspirations, investment and adaptation, not a complete social survey.

11. Persian, Dakhni and Telugu: distinct functions, shared patronage

Qutb Shahi cultural exchange is clearest when languages are separated by function. Persian operated prominently in courtly and administrative culture; Dakhni developed as an important poetic and urban language; Telugu retained literary, devotional and regional significance. Ibrahim Qutb Shah is associated with Telugu patronage, while Muhammad Quli Qutb Shah is remembered for Dakhni poetry. Such examples demonstrate cross-linguistic sponsorship but cannot justify a claim that all languages enjoyed identical access to court office or wealth.

A text's patron and intended audience shape its language. Merchants, artisans and migrants could sustain multilingual practices beyond formal court culture. Translation, performance and material exchange created contact zones without erasing religious differences. The historian should distinguish literary cosmopolitanism from social equality: a multilingual court may coexist with revenue coercion and stratification. Avoid projecting today's language politics backwards or assuming that one courtly language completely replaced local speech. Comparative questions should name specific patrons, works and institutions instead of repeating 'unity in diversity'.

12. Diamond commerce, textiles and the labour behind Golconda's wealth

Golconda became associated with diamond commerce and trade routes linking inland production and the coast. UNESCO's nomination material places the fortified city within routes connected to Masulipatam and identifies commercial functions alongside royal and religious spaces. Trade wealth depended on miners, transport workers, merchants, textile producers, money handlers and state taxation. A famous gemstone's later story is not sufficient evidence of where, when and by whom it was extracted. Nor should every diamond sold through Golconda be assumed to have been mined directly beneath the fort.

Economic history must distinguish production site, commercial market and dynastic tax claim. Overseas traders' accounts can document prices and routes but may exaggerate novelty or omit local intermediaries. Comparing commercial growth with agrarian burdens reveals that prosperity was unevenly distributed. In a mains answer, explain how the court benefited from market concentration while craft and labour networks made exchange possible. This approach moves beyond monument-centred history to the region's social economy.

13. Sammakka–Sarakka: oral history, Koya memory and protest

Sammakka and Saralamma (Sarakka) are central to the Medaram Jatara and to Koya/Adivasi memory of resistance to coercive rule. Telangana district and tourism accounts explicitly present the conflict as a **tradition or legend** associated with the Kakatiya period. They are valuable documentation of living heritage and the meanings attached to the festival, not contemporary thirteenth-century eyewitness records. The precise date, dialogue and military sequence should not be taught as certified epigraphic fact unless a matching source is produced.

The Jatara is also a present-day institution involving ritual specialists, forest space, pilgrimage logistics and public administration. Its scale and official recognition show the continuing vitality of community memory, but contemporary crowd estimates cannot verify medieval battle details. Students should respect Adivasi agency by analysing the tradition's themes—forest autonomy, taxation, kinship and sacrifice—while distinguishing them from historical proof. The district page itself recounts a legend and separately notes that Jampanna Vagu's reddish colour has a soil explanation; these genres must not be collapsed into one scientific claim.

14. Sarvai Papanna: chronology, forts and social aspiration

Sarvai Papanna Goud belongs to the late seventeenth and early eighteenth centuries, in the period surrounding the Qutb Shahi state's absorption into Mughal rule. He cannot be placed in the Kakatiya thirteenth century simply because the syllabus pairs resistance traditions. Popular narratives emphasise his challenge to entrenched elites and his appeal as a Bahujan figure. Khilashapur Fort is a tangible heritage site associated with his memory; conservation notices confirm the existence of modern work on its walls and bastions, but do not authenticate every episode of a popular biography.

An evidence-led answer should separate contemporary or near-contemporary administrative records, later regional chronicles, fort archaeology and modern commemorations. The Telangana government's 2025 heritage-development announcement and 2026 public memorial are evidence of current recognition, not direct proof of early eighteenth-century campaigns. Historical importance includes both Papanna's political mobilisation and the later public memory of social dignity. Avoid simplistic caste essentialism: mobilisation, alliances and antagonists may have varied over time, and the available archive is uneven.

15. Two resistance traditions, two source regimes

The syllabus juxtaposes Sammakka–Sarakka and Sarvai Papanna to invite comparison, not merger. Sammakka–Sarakka's tradition is rooted in Adivasi ritual memory associated with Kakatiya-era coercion; Papanna's political career is placed centuries later amid late Qutb Shahi and Mughal realignments. The first is documented today through oral and festival practice; the second can also be approached through fort remains and administrative-history questions. Both can express resistance to hierarchical extraction, but the specific opponents, dates and forms of mobilisation differ.

Comparison should have four axes: **historical setting, social constituency, form of evidence and afterlife of memory**. A good answer explains that present-day commemoration shapes identity while not erasing the need for source criticism. It avoids inventing a direct organisational link between the movements. If asked to discuss their 'contribution to Telangana identity', address how memory survives through ritual, naming, museums, public policy and education, then acknowledge that identity is interpreted differently by communities and historians.

16. Applied heritage governance: from medieval sources to current choices

A district heritage officer considering repairs to a tank adjoining a temple must coordinate archaeology, catchment hydrology and local water users. A conservation proposal should document which structures are original, which are restored and which are modern additions. At Ramappa, UNESCO specifically flags development near the lake and the need for heritage impact assessment. A tourism officer planning Medaram facilities must consult community ritual authorities and forest administrators; increasing visitor capacity does not authorise rewriting the community's oral history as certified medieval chronology.

A curator explaining Golconda should display Persian, Dakhni and Telugu examples with their provenance and social context rather than a vague label of 'perfect harmony'. At Khilashapur, restoration documentation should distinguish conservation records from claims about Papanna's exact campaigns. These four cases illustrate a common governance principle: heritage policy can respect identity while making the evidence and uncertainty transparent. For examinations, connect a specific historical source to an administrative decision and a likely trade-off: access versus conservation, tourism versus local ritual control, or commemoration versus historical precision.

17. Quick revision: chronological and evidentiary map

Approximate period / event • What is secure enough for exam use • Essential qualification

Kakatiya emergence, 12th century • Hanamkonda–Warangal centre; expansion from Chalukya milieu • Dynastic claims are not a uniform census

1213, Ramappa inscriptional context • Recharla Rudra patronage under Ganapati Deva • Temple complex has construction phases

Rudrama Devi • Woman sovereign within Kakatiya elite institutions • Does not establish universal gender equality

1323, Warangal conquest • Kakatiya dynastic sovereignty ended • Regional society and waterworks continued

Post-1323 Velama centres • Rachakonda and Devarakonda • Alliances and territories varied

Qutb Shahis, 16th–17th centuries • Golconda state, multilingual patronage • Composite culture is not equal power

1591, Hyderabad • Muhammad Quli's new urban foundation • Founding legends require independent testing

1687, Golconda conquest • Mughal incorporation of Qutb Shahi state • Papanna's resistance belongs to later transition

Medaram oral tradition • Koya memory of Sammakka–Sarakka • No certified precise medieval battle date here

2021 Ramappa inscription on UNESCO list • Modern heritage designation • Not a construction date

2010 Qutb Shahi tentative submission • Official nomination dossier • Not World Heritage inscription

18. Original diagrams — interpretation keys

Diagram A: Evidence confidence ladder. A dated inscription or architectural fabric supports bounded material claims; an edited literary work supports authorial or cultural claims; oral tradition supports lived memory; a modern press release supports present-day policy. Cross-check before extending any of them to military events or social statistics.

Diagram B: Political ecology of the Kakatiya landscape. Seasonal rainfall → storage and maintenance → cultivated surplus → local power and royal claims → temples, markets and military support. Inequality in land and water access can alter each arrow.

Diagram C: Separate timelines of resistance. Kakatiya-period Sammakka–Sarakka association (oral tradition) ≠ late-seventeenth/early-eighteenth-century Papanna (fort and administrative-history questions). Both are commemorated today, but evidence types differ.

19. Dated primary-source and evidence register (audit, not a claim of academic approval)

ID • Source and dated anchor • Claim supported • Evidence class / limitation

S01 • TGPSC Notification 02/2024, 19 Feb 2024, original commission-hosted PDF • Exact Paper II / Section II / Item 2 scope • Official syllabus; directly opened and inspected

S02 • UNESCO World Heritage Centre, Ramappa inscription decision, 25 July 2021 • Modern inscription of Ramappa • Official heritage decision, not medieval event

S03 • UNESCO Ramappa property record, updated boundary 2025 • Site setting, materials and management • Institutional synthesis, not original field diary

S04 • Ramappa/Palampet inscription, 1213 CE • Recharla Rudra patronage context • Named primary inscription; original rubbing not obtained

S05 • Hanamkonda inscription, 1163 CE • Rudradeva-era temple patronage • Named epigraphic source; critical edition not inspected

S06 • Nrtta Ratnavali, Jayapa Senani, Kakatiya period • Medieval performance categories • Named primary text; manuscript variants not inspected

S07 • UNESCO Qutb Shahi tentative-list submission, 10 Sep 2010 • Golconda/Hyderabad chronology, material monuments • State nomination dossier, not inscription on World Heritage List

S08 • Persian epitaphs on Qutb Shahi tombs, 1543–1672 as identified in UNESCO dossier • Monument dating and dynastic necropolis • Primary inscriptions identified through institutional dossier; original transcripts not retrieved

S09 • Charminar foundation, 1591, dated in UNESCO dossier • New Hyderabad urban foundation • Built heritage and historical dating; legends excluded

S10 • Mulugu district Medaram Jatara page, accessed 26 Oct 2026 • Community tradition and festival context • Current government account of oral legend, not medieval eyewitness source

S11 • Telangana Tourism festival page, accessed 26 Oct 2026 • Sammakka–Sarakka living cultural tradition • Modern interpretive source, not proof of precise battle dates

S12 • Telangana Department of Heritage conservation list, accessed 26 Oct 2026 • Khilashapur fort conservation • Contemporary government work record, not Papanna campaign ledger

S13 • Telangana State Portal, 2025 Papanna commemoration • Present-day public memory and proposed heritage work • Government press release, not primary early-modern record

S14 • Telangana State Portal, August 2026 Papanna memorial • Modern commemoration • Government release; not evidence of 17th-century chronology

S15 • Nalgonda district heritage account, accessed 26 Oct 2026 • Rachakonda/Devarakonda fort identification • Government heritage narrative; exact chronology requires epigraphy

S16 • Original 1323 Warangal conquest sources (Persian chronicles), named for follow-up • Dynastic transition • Full critical editions not retrieved; no verbatim claim attributed

30 original four-option explained practice MCQs

Not official TGPSC PYQs. Each item is original study practice.

Q1. Which evidence most directly anchors the patronage context of the Ramappa temple?

A) odern tourism slogan

T) Palampet inscription associated with Recharla Rudra

A) undated folk ballad

A) ecent school textbook cover

Answer: B. The 1213 Palampet inscription is a named contemporary epigraphic anchor; a slogan or later retelling cannot establish the same patronage claim.

Q2. What is the safest interpretation of UNESCO World Heritage inscription in 2021?

T) temple was built in 2021

A) sculptural figures date to one year

I) is a modern recognition of heritage value I) proves uninterrupted ritual practice

Answer: C. World Heritage listing is a contemporary conservation decision, not a construction or performance chronology.

Q3. Why should Kakatiya nayaka arrangements not be equated automatically with later Vijayanagara institutions?

T) y were all elected councils M) itary and resource obligations changed across contexts V) ayanagara lacked armies

B) h are known only from modern films

Answer: B. Comparable patterns of delegated power do not establish identical rules across centuries and states.

Q4. A dated royal inscription is strongest evidence for which claim?

E) ry peasant supported the ruler T) inscription records a particular donor or grant N) conflict occurred during the reign

A) villages shared one language

Answer: B. Inscribed acts and titulature are bounded claims; population-wide social generalizations require other evidence.

Q5. What does the proximity of Ramappa temple and reservoir best support?

T) ple and water landscape were linked E) ry household had equal water R) ervoir maintenance was unnecessary

A) masonry was built in one season

Answer: A. The UNESCO site description links the temple setting to a Kakatiya reservoir; equal distribution cannot be inferred.

Q6. The fall of Warangal in 1323 primarily marks what?

D) appearance of Telugu literature

E) of Kakatiya dynastic sovereignty

D) truction of every irrigation tank

F) ndation of Hyderabad

Answer: B. The conquest changed dynastic rule, but social and cultural continuity persisted.

Q7. Which is the most defensible statement about Rudrama Devi?

H) rule proved gender equality for all S) held sovereignty within gendered political institutions S) never used royal titles N) military contest affected her rule

Answer: B. A woman ruler exercised real authority without erasing wider social hierarchies.

Q8. Rachakonda and Devarakonda should be studied as what?

T) distinct fortified Velama political centres I) ntical Qutb Shahi tombs M) hal capitals founded in 1591 P) ts on the Bay of Bengal

Answer: A. They were distinct post-Kakatiya centres associated with Velama lineages and shifting alliances.

Q9. Which pair is most appropriate for investigating Kakatiya dance heritage?

M) ern TV adverts and census returns N) ta Ratnavali and Ramappa sculpture R) lway timetables and copper coins

C) rminar maps and Mughal firmans

Answer: B. The treatise and sculpture offer complementary textual and visual evidence, but not a full uninterrupted choreography.

Q10. Why is a modern Perini performance not proof of unchanged medieval choreography?

D) ce cannot be historically studied

R) ivals involve interpretation across evidence gaps N) medieval treatise mentions performance S) lpture is always false

Answer: B. Reconstruction may be informed by medieval sources but requires evidence of continuity before being called unchanged.

Q11. Which event is securely linked with 1591?

W) angal conquest F) ndation of Hyderabad under Muhammad Quli Qutb Shah R) appa UNESCO inscription P) anna fort conservation

Answer: B. The new Qutb Shahi city was founded in 1591; the other events belong to different periods.

Q12. The Qutb Shahi monuments entered UNESCO records in 2010 as what?

A) inscribed World Heritage Site

A) tate Party tentative-list submission

A) odern archaeological excavation diary

A) independent academic peer review

Answer: B. The 2010 dossier is a tentative listing, not inscription on the World Heritage List.

Q13. Which language pairing is most historically defensible for Qutb Shahi cultural analysis?

O) y Persian was spoken in Telangana P) sian, Dakhni and Telugu had distinct overlapping functions T) ugu disappeared after 1518

D) hni was invented in 1948

Answer: B. The multilingual court and society supported different uses of Persian, Dakhni and Telugu.

Q14. What does Ibrahim Qutb Shah’s association with Telugu patronage show?

A) subjects were socially equal

A) ersianate-linked court could sponsor regional language

C) rtly Persian vanished

L) erary works were all authored by kings

Answer: B. Cross-linguistic patronage demonstrates exchange, not equality of power or a single court language.

Q15. Which statement best describes Golconda diamond commerce?

E) ry diamond sold there was mined below the fort T) de networks connected mines, merchants and markets T) re were no textile producers N) taxation was possible on trade

Answer: B. A commercial centre can trade commodities sourced from multiple production zones.

Q16. Which evidence most directly dates certain Qutb Shahi tombs?

M) ern street names P) sian epitaph inscriptions U) erified WhatsApp forwards

A) resent-day festival poster

Answer: B. The UNESCO dossier identifies dated Persian epitaphs on royal tombs as important chronological controls.

Q17. What is the correct status of Sammakka–Sarakka battle chronology in this audit?

P) cisely certified by a medieval battle ledger R) ted in living oral tradition; exact medieval dates not independently verified

A) ughal event of 1687

A) eighteenth-century British protest

Answer: B. Government heritage pages describe a legend associated with Kakatiya-era coercion; they are not eyewitness chronicles.

Q18. Why is the Medaram Jatara important to social history?

I) supplies a complete 13th-century tax roll I) preserves Adivasi ritual memory and contemporary collective identity I) proves every oral detail archaeologically I) originated as a Qutb Shahi royal tomb

Answer: B. The festival demonstrates living Koya/Adivasi memory and community practice without certifying every ancient detail.

Q19. Which interpretation of Jampanna Vagu is appropriately source-sensitive?

R) dish water alone proves medieval bloodshed T) district account separates ritual belief from soil explanation I) name comes from a Mughal governor T) stream was excavated in 2021

Answer: B. The district heritage page reports belief and notes a soil-related explanation for the colour.

Q20. Sarvai Papanna belongs mainly to which historical transition?

E) ly Harappan urbanism L) e Qutb Shahi to Mughal Deccan E) ly Vedic pastoralism P) t-1947 linguistic reorganisation

Answer: B. His resistance is placed in the late seventeenth and early eighteenth centuries, not the Kakatiya thirteenth century.

Q21. What does a 2025 government statement about Khilashapur establish?

P) anna’s exact battle casualty figures

C) temporary heritage-development intentions

A) 700 tax register

A) inscription by Rudrama Devi

Answer: B. Modern state announcements establish present policy or commemoration, not a contemporaneous early-modern military record.

Q22. Which comparison between Sammakka–Sarakka and Papanna is sound?

B) h led the same campaign in 1323

T) y belong to different periods and source traditions

B) h founded Hyderabad

B) h are documented by the same dated Persian epitaph

Answer: B. The syllabus juxtaposes distinct resistance memories; it does not make them a single event.

Q23. A heritage officer assessing Ramappa lake development should prioritize what?

O) y souvenir sales H) itage impact and catchment effects I) oring local communities T) ating every modern repair as original

Answer: B. UNESCO identifies development near the lake as a conservation concern and calls for impact assessment.

Q24. What is the most important limitation of a royal eulogy?

I) cannot contain dates I) is written to advance a patron’s prestige I) is always in English I) must describe ordinary wages

Answer: B. Eulogies are purposive texts and cannot be read as neutral surveys of a realm.

Q25. Which evidence would best strengthen a disputed medieval construction date?

A) ated inscription and stratigraphic context

A) unsourced social-media post

A) odern election result

A) advertising slogan

Answer: A. Independent contemporary inscriptional and archaeological controls are stronger than later assertion.

Q26. What is the central analytical link between tanks and sovereignty?

S) rage could support surplus and revenue claims T) ks eliminated all land inequality I) igation made warfare impossible R) ervoirs had no maintenance costs

Answer: A. Storage could enlarge cultivation and taxable surplus, though labour and access were uneven.

Q27. Which statement about the Qutb Shahi composite culture is most precise?

N) conflicts occurred

A) istic and linguistic exchanges coexisted with unequal power

A) religious communities had identical privileges

E) ry monument used a single architectural tradition

Answer: B. Composite culture names documented contact, not the absence of hierarchy or conflict.

Q28. What does the UNESCO Qutb Shahi tentative-list dossier identify about Charminar?

A) eremonial urban node in a planned city

A) akatiya irrigation sluice

A) ineteenth-century British railway station

A) ancient Buddhist stupa

Answer: A. The dossier connects Charminar with the 1591 foundation and axial urban plan of Hyderabad.

Q29. Which method is best for answering a question about Velama political territory?

A) ume a fixed modern district boundary

C) ss-check dated inscriptions, forts and changing alliances

T) at all Velama courts as one city I) ore the post-1323 transition

Answer: B. Boundaries and alliances changed; modern districts should not be projected uncritically backward.

Q30. What makes a good source-critical mains answer?

A) ong ruler list without dates

A) laim, named source, its limitation and a reasoned conclusion

U) ttributed battle dialogue T) ating oral traditions as false by definition

Answer: B. Source criticism respects different evidence types while preventing unsupported certainty.

Six complete original structured mains model answers

Original practice, not official previous-year questions. Target: 200–250 words per answer, excluding question and headings.

Q1. Assess how inscriptions and material remains change our understanding of Kakatiya political power.

Introduction

Kakatiya rule in medieval Telangana is best understood through the interaction of royal claims, military intermediaries, agrarian resources and cultural patronage. Inscriptions and monuments reveal more than a chronological succession of kings.

Political evidence

The Hanamkonda inscription associated with Rudradeva and the Palampet inscription linked to Recharla Rudra provide anchors for patronage and sovereignty. Yet a royal inscription celebrates a donor and cannot be treated as a neutral account of every village. Ganapati Deva's expansion depended on commanders and local elites; this complicates the picture of a uniform central bureaucracy.

Material and ecological evidence

Warangal's gateways and fortifications show ceremonial and defensive investment, while the Ramappa complex links temple architecture to a reservoir landscape. Tanks could support settlement, surplus and fiscal claims, but their construction and upkeep required labour often invisible in royal records. Rudrama Devi's regnal representation also demonstrates that sovereignty was negotiated within gendered political conventions.

Limits and conclusion

The 1323 conquest ended dynastic authority, not Telugu culture or irrigation. Archaeological layers and critical editions are needed before assigning every structure to a ruler or accepting triumphant inscriptions literally. **Thus Kakatiya power was negotiated and materially sustained**, not simply imposed from a capital. A sound interpretation combines political history with evidence of land, labour and patronage.

Q2. Explain the connection between Kakatiya irrigation, agrarian surplus and social hierarchy.

Background

The Telangana plateau's seasonal rainfall made water storage a central condition for agricultural stability. Kakatiya-associated tanks were therefore simultaneously environmental works and instruments of political economy.

Mechanism

A reservoir stored monsoon runoff, supported cultivation and could increase the area from which chiefs or kings claimed revenue. Greater surplus helped finance garrisons, temples, traders and artisans. The Ramappa lake setting illustrates the relationship between water and sacred architecture. But a dam required earthwork, desilting, bund repairs and agreement over sluice operation. These tasks involved local households and specialised workers, not merely a royal decree.

Unequal outcomes

Benefits were mediated by land tenure, field location and access to authority. Powerful landholders could capture dependable water while marginal cultivators bore labour obligations. An inscription naming a donor rarely supplies a complete distributional account. Pakhal and Laknavaram must also be dated and interpreted separately rather than treated as identical schemes.

Present relevance

Modern restoration programmes demonstrate the continuing importance of maintenance but do not prove that medieval management matched present engineering rules. Heritage conservation near Ramappa must protect the catchment as well as masonry.

Conclusion

Kakatiya irrigation strengthened productive capacity and state legitimacy, but its outcomes depended on local institutions and social inequality. **The tank was a negotiated ecological system**, not an automatic instrument of universal prosperity.

Q3. Critically evaluate the contribution of Velama polities to Telangana after the fall of Warangal.

Context

The fall of Warangal in 1323 ended Kakatiya dynastic rule and opened a period of competing claims over forts, agrarian resources and political allegiance. It did not create a cultural vacuum.

Political role

Rachakonda and Devarakonda became important fortified centres associated with Padma Nayaka Velama lineages. Their rulers negotiated changing relations with neighbouring chiefs and larger Deccan powers. Strategic forts controlled movement and offered security, while alliances and conflict shaped territorial claims. The two centres should not be represented as a single unchanging state with modern district boundaries.

Cultural contribution

Local courts continued to support Telugu literary, religious and architectural activity. Forts and temples show investment in craft and ceremonial authority; they also required builders, traders and agrarian revenue. Patronage extended cultural production beyond the fallen Kakatiya capital. Yet praise-poems and genealogies were composed for patrons, so their accounts of victory and legitimacy require comparison with inscriptions and external evidence.

Historical qualification

District heritage narratives help identify sites but cannot settle every reign date. Nor should relations with Bahmani or Vijayanagara powers be reduced to permanent religious blocs; alliances were often political and contingent.

Conclusion

Velama polities demonstrate **regional state formation and cultural continuity amid political fragmentation**. Their contribution is best assessed through forts, literary networks and changing power relations, not through an uninterrupted heroic dynasty story.

Q4. Analyse Qutb Shahi composite culture with reference to language, architecture and urban commerce.

Introduction

Composite culture in the Deccan describes identifiable exchanges among people, languages and artistic forms. Under the Qutb Shahis, these interactions developed alongside hierarchy, military conflict and state taxation.

Linguistic patronage

Persian served major courtly and administrative purposes; Dakhni became important in poetry and urban culture; Telugu continued in regional literary life. Ibrahim Qutb Shah's association with Telugu patronage and Muhammad Quli Qutb Shah's Dakhni poetry illustrate overlapping audiences. They do not establish identical social power for every language community.

Architecture and city

Golconda's fortified settlement, waterworks and tombs demonstrate regional adaptations of wider Deccan and Persianate forms. Hyderabad's foundation in 1591 placed Charminar within a planned ceremonial and commercial urban grid. The UNESCO dossier submitted in 2010 documents this ensemble, but it remains a **tentative-list** record rather than World Heritage inscription.

Economic networks

Diamond commerce and textiles drew merchants, miners, artisans and transport workers into networks extending toward the coast. Court prosperity depended on these producers and on revenue extraction; monument-centred accounts alone hide their contribution.

Critical conclusion

Multilingual patronage and mixed architectural practices demonstrate cultural encounter, not an absence of inequality. A historically balanced answer names particular texts, patrons and material sites, then asks who benefited from urban wealth. **Composite culture was a process of exchange under unequal power**, not a timeless condition of perfect harmony.

Q5. Compare Sammakka–Sarakka and Sarvai Papanna as resistance traditions in Telangana.

Introduction

Both traditions are central to Telangana's memory of resistance, but they belong to different periods and different evidentiary contexts. Their comparison requires historical precision and respect for community memory.

Sammakka–Sarakka

The Medaram Jatara sustains Koya/Adivasi remembrance of a mother and daughter associated with opposition to coercive Kakatiya-era demands. Government heritage accounts describe this as tradition or legend. They establish the importance of contemporary ritual and identity, not a certified date for every medieval encounter. Forest autonomy, taxation and sacrifice are recurring themes.

Sarvai Papanna

Papanna belongs to the late seventeenth and early eighteenth centuries, amid the Qutb Shahi–Mughal transition. Khilashapur Fort and subsequent public commemorations connect his memory to social aspiration and challenges to entrenched authority. Modern conservation announcements are evidence of present recognition, not contemporary campaign records.

Comparison

The first tradition is especially accessible through oral ritual transmission; the second invites investigation through forts, chronicles and administrative history. Both challenge simple elite-centred narratives, yet their constituencies, opponents and source types cannot be merged. Nor does modern public honour eliminate historical uncertainties.

Conclusion

Their shared significance lies in the enduring politics of dignity, autonomy and remembrance. **Responsible history separates the event, the surviving evidence and the later commemoration**, preserving cultural meaning without inventing dates or organisational continuity.

Q6. Design a source-sensitive heritage-management approach for Ramappa, Medaram and Khilashapur.

Objective

Telangana's heritage policy must protect historical fabric, sustain living communities and communicate evidence accurately. Ramappa, Medaram and Khilashapur present distinct conservation and interpretation challenges.

Ramappa

The temple's sculptural and architectural significance is inseparable from the surrounding lake and catchment. UNESCO's management material flags potential impacts from development near the reservoir. A heritage impact assessment should evaluate water flows, visitor infrastructure, visual setting and maintenance, while consulting local residents and religious authorities.

Medaram

The Jatara is living Adivasi ritual heritage, not merely a tourism event. Crowd management, sanitation, forest safeguards and transport planning should be undertaken with community ritual specialists. Official communication must identify the Sammakka–Sarakka narrative as revered oral tradition rather than present an exact medieval battle date as archaeologically certified.

Khilashapur

Fort conservation should document original fabric, past repairs and proposed interventions. Interpretive panels can explain Papanna's late Qutb Shahi–Mughal context and contemporary Bahujan commemoration, while labelling disputed campaign details. Government restoration announcements must not substitute for early-modern archival evidence.

Governance conclusion

Each site needs transparent provenance, local consultation and conservation safeguards. Tourism income should not determine historical claims. **A defensible policy combines physical protection, cultural rights and honest uncertainty**, allowing visitors to appreciate heritage without confusing modern recognition with proof of every traditional account.
